

SANLORENZO

At the Fort Lauderdale International Boat Show 2022 with two US Premières for Sanlorenzo

SP110 and SL120A presented to the American market for the first time

Press release, 18 October 2022 - Sanlorenzo returns to the **Fort Lauderdale International Boat Show**, to be held from **26 to 30 October 2022**, with two revolutionary vessels making their overseas debut at the most important boat show in the USA. The open coupé **SP110** and the asymmetrical **SL120A** will be the absolute stars of the world's largest in-water kermesse.

SP110 is a sophisticated project created from the collaboration of a team of professionals at the highest levels of their individual skills and expertise with *Bernardo Zuccon* for the exterior lines, *Tilli Antonelli* for product development at Sanlorenzo, *Marco Arnaboldi* for the hull design and *Piero Lissoni* for the interiors.

With this new model, Sanlorenzo **enters the world of sports yachts** with a revolutionary proposal, combining green sensibility and unique comfort with unparalleled performance. **Fractional propulsion, lightweight materials**, and a **hull optimised** for hydro jet propulsion are the main features of this first yacht in the SP - "Smart Performance" range, which aims to guarantee the highest performance with maximum energy efficiency. **Sustainability is also present on the SP110**: the yacht is in fact equipped with an **energy recovery system that uses monocrystalline solar panels**.

An exterior design by **Zuccon International Project**, which conveys the strong emotional character of the vessel, and a design of the interior spaces articulated as a "vertical loft" by **Piero Lissoni**, complete one of the most revolutionary projects in the history of Sanlorenzo.

Flanking the avant-garde SP110 on the docks of Fort Lauderdale is another model that encapsulates the strength of Sanlorenzo's innovation: the **SL120A**, a planing model of almost 40 metres, **flagship of the asymmetric line**.

Presented to the American market for the first time, the SL120A is a vessel that **takes the concept of asymmetry to its maximum expression**: the space of the main deck living area that extends from the cockpit to the centre of the vessel allows for a totally revised usability compared to other yachts in the same range. The asymmetry allows for the full liveability of the interior space of the adjoining forward area, where the owner's cabin is located and which extends the entire width of the hull. The starboard side almost dematerialises thanks to a system of sliding doors that allow a total connection with the outside environment.

The SL120A's design pays **particular attention to the external spaces**, an example of which is the outdoor living area in the bow, accessible directly from the owner's cabin, as well as the garage that can be converted into a grandiose 45 square metre Beach Club by folding down two terraces to allow guests complete enjoyment of the sea "au fil de l'eau".

With the debut on the US market of two of the shipyard's most avant-garde models, Sanlorenzo once again reconfirms its leadership in the sector, the result of a strategic vision rooted in the choices made more than ten years ago and enriched with new directions for the current decade.

Through **Sanlorenzo Americas**, the historic brand ambassador in the US, the company has been able to build steady growth in recent years in a key market for the Group, starting from the founding concepts of design, art and innovation in the tradition, which are now also joined by sustainability and technology, developed according to the evolving needs and desires of overseas clients.
